## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of Group II is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 4 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 4 and 5 a porous ceramic is claimed which would require the product to be sintered. However the claims set forth asbestos would is no longer present in the sintered body. The meets and bounds of the claims cannot be determined because these limitations are contradicting.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese document 09206726 further in view of one of Hashimoto et al (4,874,153) or Simpson et al (5,830,251).

The Japanese document teaches a sintered compact including asbestos and sewage sludge incinerated ashes (see examples 4 and 5). The mixture can be used for building materials adsorbent (which would require porosity), bricks and tiles. The Japanese document fails to teach the addition of a binder.

Hashimoto et al teach ceramic products made from incinerated sewage sludge where a material such a clay may be used as a binder thus helping to reduce cost and aid in preparation of the products, see column 3, lines 5-10.

Simspon et al also add organic and inorganic binders to increase green strength and control the final properties of the product, see column 10, lines 51-61.

The fusing agent of claim 5 is not considered to be patentably distinguishable from the clay binders taught by the secondary references which would form a glass phase.

It would have been obvious to one of ordinary skill in the art at the time of the invention to further include a binder in the composition of the Japanese document to form the claimed tile, brick, etc. because the secondary references teach the addition of such binders has such advantages as aiding in forming, green strength.
